BIA – Business Impact Analysis

PCO - Process Operational Continuity Plan

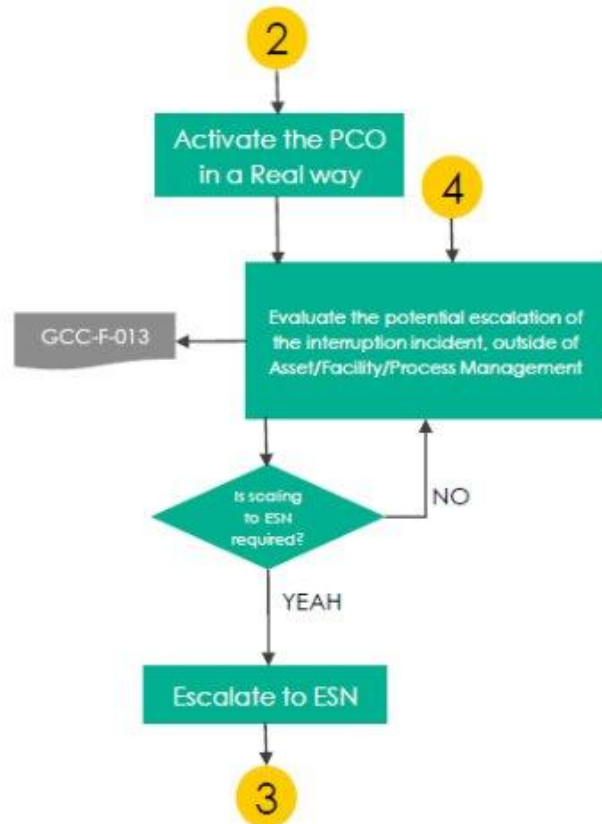

Activation flow

ACTIVITY .	RESPONSIBLE .
Receive alarm or incident information Notify the SD, Department Heads/Process Coordinators	Whoever knows the information about the alarm or incident
Evaluate whether the alarm or incident affects or could affect the continuity of a critical process or function. N1: Activate attention team (EMI : Incident Management Team) N2: May require activating the PCO	Department Heads/Critical Process Coordinators
YES: Review the level of preparation with the help of the format: GCC-F-007 "PREPARATION CHECKLIST..."	Department Heads/Critical Process Coordinators
To control its cause and prevent its materialization or escalation: emergency plan and contingency plan and/or incident management	Command on scene/Incident commander/Incident management manager
Determine the need to declare the operation of the process/asset in contingency Activate and session the Incident Command (EMI : Incident Management Team)	Process manager
Totally or partially activate continuity strategies or solutions (PCO) Process manager: activate strategies and solutions	Department Heads/Critical Process Coordinators Process manager

PCO - Process Operational Continuity Plan

Activation flow

ACTIVITY .

Activate continuity strategies or solutions, according to their impact (PCO)
Process manager: activate strategies and solutions

Evaluate potential of the event? Can it overcome the handling and delegation of Management?
Establish the need for resources of the VP or Identify consequences that require further escalation

ESN
YES: Escalate to VP ESN

Greater management capacity, affecting continuity of the VP or business segment or Crisis
N5: Escalate to the **CCE** : Business Crisis Committee

RESPONSIBLE .

Process manager

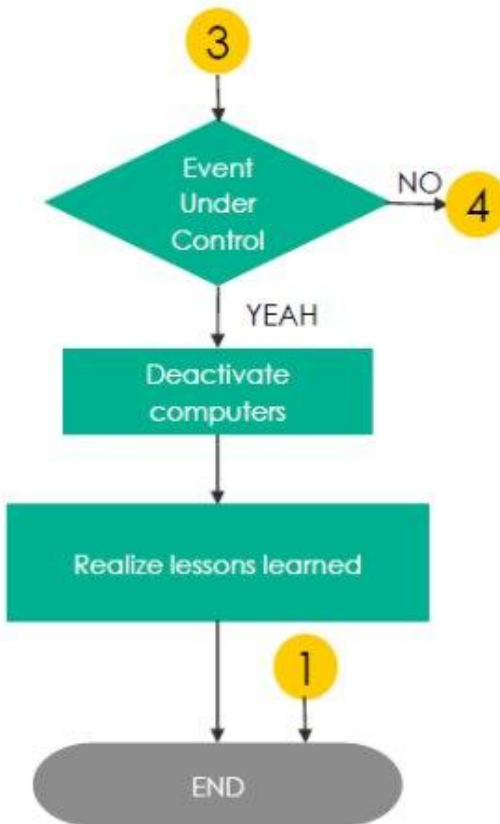

Incident Commander
(Report findings)

Incident Commander

Incident Commander

PCO - Process Operational Continuity Plan

Activation flow

ACTIVITY .	RESPONSIBLE .
Managed at the asset/process level Monitor and evaluate the situation. Maintain plans and equipment at each level. Return to the stage of analyzing status and evolution.	Incident command
Disable response teams. Start activities to return to normality Incident closure Carry out post-incident activities	Incident command Delegated team
Perform lessons learned and report them - Of real activations (term 1 month) - Preventive activations (every end of quarter)	Practice Leader and/or Service Coordinators/Leaders VoBo Manager reports delivered

CONTINUITY SCENARIO **Operational Continuity Plan –PCO**

Scope and Objectives Test PCO-VTI
2025

Objetivo y sentido de este plan

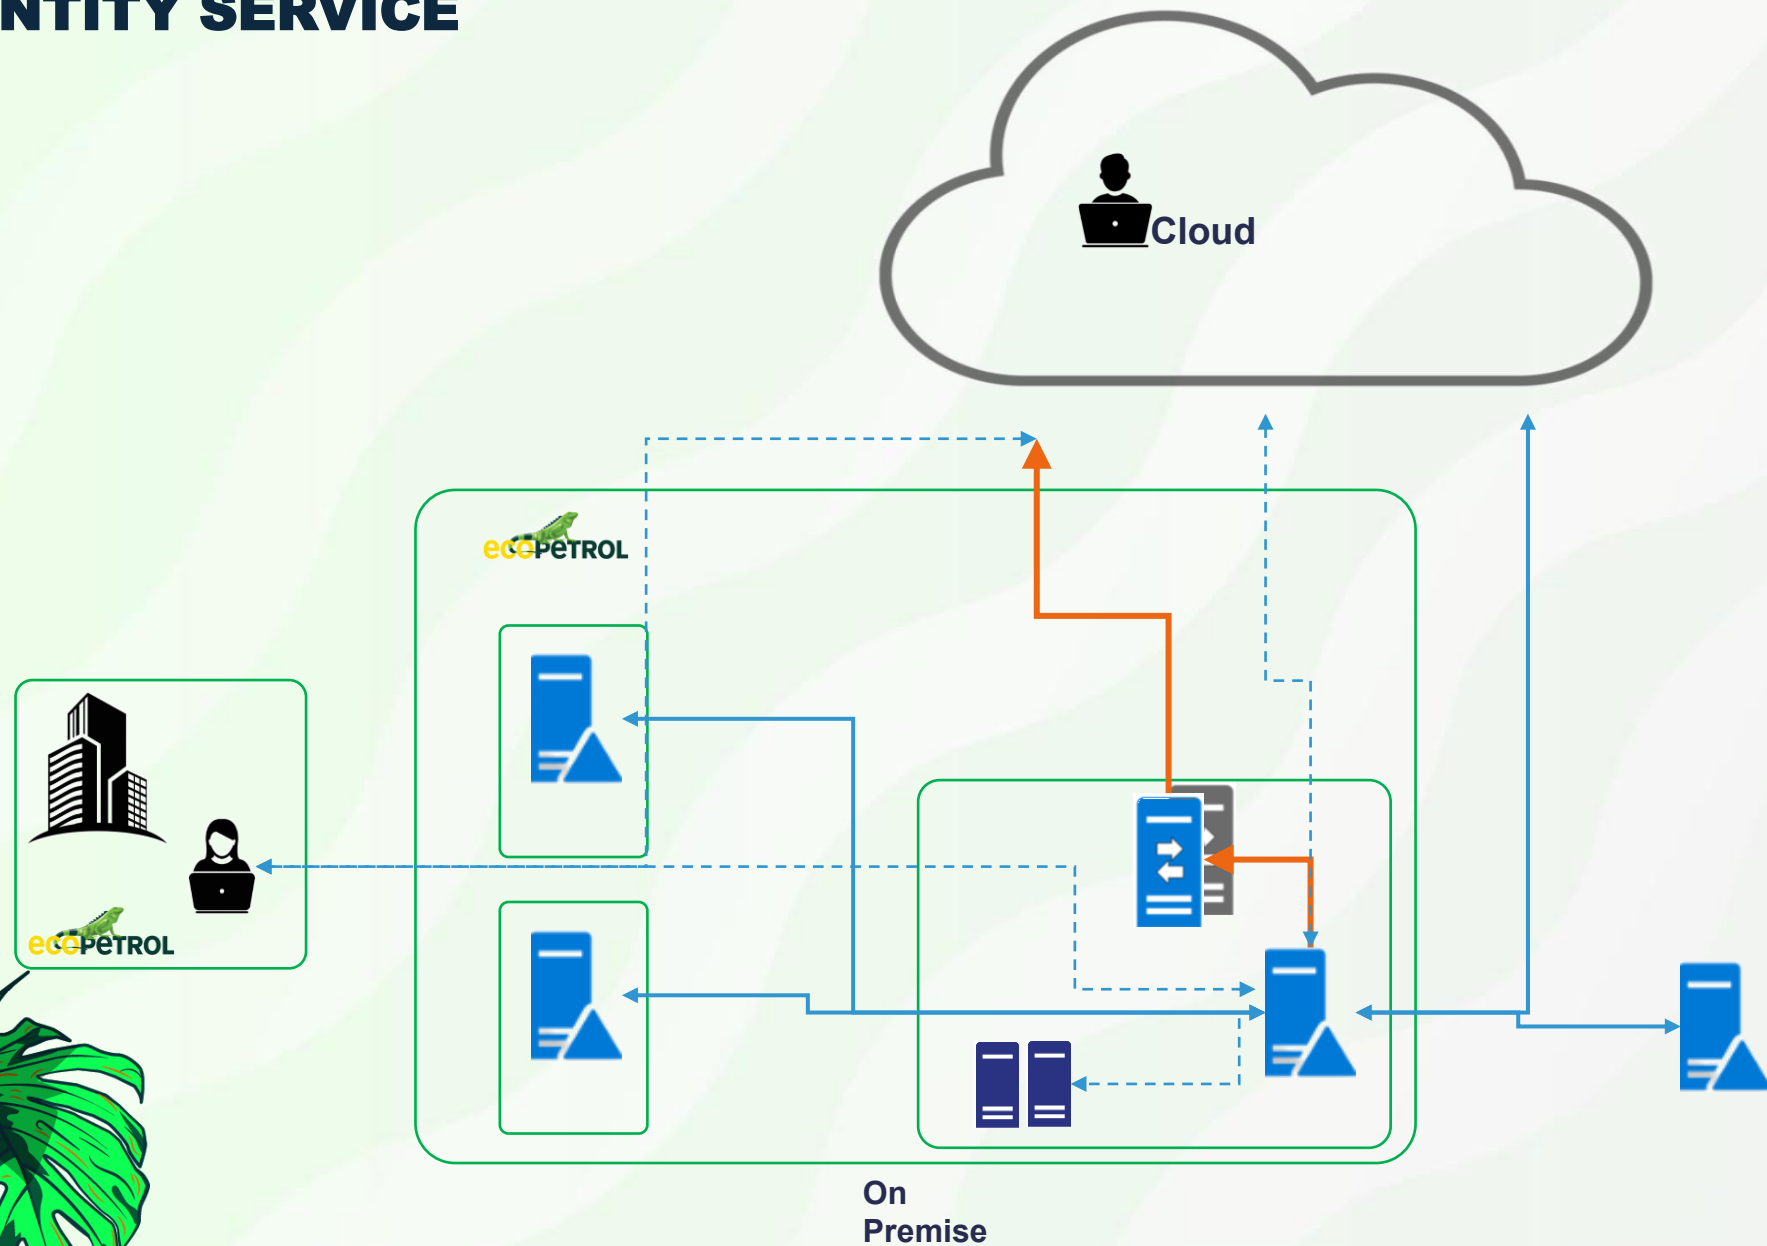

GENERAL OBJECTIVE OF THE TEST:

The main objective of the test is to simulate the activities to be carried out when an incident occurs of the deletion of all network accounts in Onpremise/cloud, in order to increase the capacity of the VTI to anticipate and respond to this type of incident.

SPECIFIC SCOPE

- Event Identification (Detection)
- Log incidents arising from monitoring too
- Activation of Response and Notification (Alarm)
- Incident Management
- Team (EMI) Activation
- Activation of the Business Support Team
- Human Resources Enlistme
- Definition and Control of Necessary Resources
- Clarity in Assumed Roles
- Clarity in the activities to be carried out
- Control Response Standard Operating Procedures
- Analysis of Operational Continuity Impacts
- Operational Communications towards Continuity (Business Support)
- Using Documentation and Templates in Incident Command Activation
- Incident
- Command activity logging and tracking
- Ensure service restoration

ARCHITECTURE IDENTITY SERVICE

Scenario to be tested according to PCO VTI

Business Continuity Scenario -GE	PCO Scenario	Sub-stage	Variant
Disruption of critical IT/OT applications and services due to technology disaster	ECO-006 availability of Technology.	SUBECO-006-01 Unavailability of IT applications	Unavailability of access to network accounts that allow access to Microsoft 365 services (Outlook, SharePoint, Teams and other applications linked to Active Directory)

ASPECTS OF THE TEST

Process continuity loss scenarios - Infrastructure - Applications

AIM: Unavailability of access to network accounts that allow access to Microsoft 365 services (Outlook, SharePoint, Teams and other applications linked to Active Directory)

Critical Process: **Process:** Technology and Innovation
Threat: Human error or a cyberattack that deletes or disables all Active Directory accounts, impacting all solutions that rely on this authentication. **Activity:** Restore the service as quickly as possible. **Procedure:** Activate critical accounts based on priority

Scope: Obtain an email distribution list of all critical solutions to be restored via script; subsequently restore the replication across the entire organization and activate the remaining accounts.

RTO: 8

RPO: 24

Risks (H-VH): Cyberattacks, human errors, technological operational incidents.

Test Topics

Beginning:

Creating temporary accounts

List of Ecopetrol users with critical functions to activate temporary accounts with a script

Incident Resolution

Incident analysis from service status review, incident notification in whatsapp chat for critical/high/massive incidents, creation of crisis room, creation of emergency accounts, Backup Recovery On-premise synchronization to cloud: Service verifications and closure of the incident in service manager and whatsapp chat.

PCO VTI Activation

CONTINUITY SCENARIO

Strategic Continuity Plan -PCE

Scope and Objectives
Test PCE-VTI 2025

Scope PCE

In 2025, the Strategic Continuity Plan (PCE) test was also conducted in conjunction with the business continuity team, using a scenario involving a cyber incident affecting the ROMSS application at the Barrancabermeja refinery. Due to confidentiality requirements, the documentation and results of this test are handled by Ecopetrol's Continuity Governance team, from which the IT continuity practice of the VTI (Vice Presidency of Information Technology) receives its guidelines. Business areas of the refinery were involved in this test, and the delegation protocol was activated to notify the corporate crisis committee.
